 Vibration Isolators <i>Ref. Section I</i>	 POW - Matching Flanges <i>Ref. Section J</i>	 FT - Mounting Foot <i>Ref. Section J</i>
 SD - Star/Delta switch <i>Ref. Section M</i>	 Variable speed drives <i>Ref. Section M</i>	 VA - Speed controller <i>Ref. Section M</i>

DESCRIPTION

The PowerLine Series® of In-Line Centrifugal Fans is designed for a wide range of duct mounted applications. They are most suitable in commercial and industrial applications where medium to high air pressure is required. They are available in various speed options and 8 sizes, extending from 315 to 710mm diameter.

Typical Applications

Commercial and industrial supply or exhaust air applications such as shopping centres, office buildings, exhibition centres, hotels, health centres, schools and universities.

Features

- Robust, yet lightweight galvanised steel construction.
- Easy to fit 35mm TDF profile flange connections.
- Choice of external rotor or standard direct-drive TEFC motors.
- Large choice of speeds available.
- Most 3-phase external rotor motors fitted are 2-speed star/delta design.
- To improve energy efficiency, motors can be speed-controlled
- Motors complying with Ex d, Ex e, Ex nA and Ex tD Standards can be fitted.
- Can be mounted in any position.
- A range of matched ancillaries is also available.

Construction

Galvanised steel housings with 35mm TDF profile flange connections.

Backward-curved centrifugal impellers. DD impellers are made from aluminium, ER impellers made from high performance injection moulded composite plastic.

Motors

Type - can be supplied with direct-driven external rotor or standard direct-drive TEFC motors.

Electricity supply - single or three-phase to suit a wide range of voltages and frequencies.

Bearings - sealed-for-life, ball.

External rotor motors are fully speed-controllable using electronic or auto-transformer controllers, however Sinusoidal filters are required when a variable speed drive is used.

Standard direct-drive TEFC motors can be single or multi-speed and can be speed-controlled using a variable speed drive.

See pages O-2/3 for details on external rotor motors and pages O-3/4 for details on standard direct-drive TEFC motors.

If standard frame motors complying with Ex d, Ex e, Ex nA and Ex tD Standards are required, selection can be made from these pages.

Internal Thermal Protection

Automatic-reset type is fitted as standard to external rotor motors and is an optional extra on standard frame motors.

Testing

Air flow tests to ISO5801:2007

Noise tests to BS848:Part 2, 1985

Wiring Diagram

See pages N-8, diagrams ER1, 2, 3, 4, 5 for external rotor motors and N-6/7, diagrams DD1, 2, 3, 7, 9 for standard direct-drive TEFC motors.

SUGGESTED SPECIFICATION

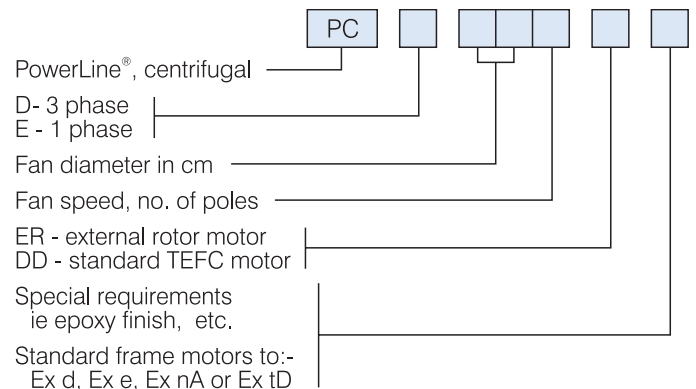

The duct mounted fans shall be of the In-line Centrifugal PowerLine® Series as designed and manufactured by Fantech Pty Ltd and be of the model numbers shown on the schedule/drawings.

They shall include galvanised steel housings with 35mm TDF profile flange connections.

The backward-curved centrifugal impellers shall be driven by external rotor or standard direct-drive TEFC motors as nominated.

All models shall be fully tested as a complete assembled unit to ISO5801: 2007 for air flow and BS848:Part 2, 1985 for noise.

HOW TO ORDER

Note

Performance curves shown are based on nominal speeds.

As motor speeds may vary from one manufacturer to another, and from one motor type to another, it is possible actual fan speeds may differ and, therefore, the performance of the fan.

For external rotor motor performance refer to Fans by Fantech Selection Program

Electrical data in **bold** type refers to fans fitted with 2-speed star/delta motors as standard.

* Amperages for standard TE motors can be obtained at time of order. Check fan nameplate for exact amperages of all motors.

** Add the In-Duct Spectrum Corrections to the appropriate dB(A) level to obtain the In-Duct Sound Power Level. Note: there are noise levels for both the Inlet and Outlet Sides of the Units.

† The PCE316ER unit is not speed controllable.
