N2T & N3T RECTANGULAR DUCT ATTENUATORS

DESCRIPTION

Fantech Rectangular Attenuators with 200mm and 300mm thick tapered splitters are available in different models to suit a variety of applications and duct dimensions. They can be made in different widths and heights, and each model number denotes a different percentage of open area and length combination. They provide superior insertion loss and pressure drop performance over standard rectangular attenuators.

They are available in the following models:

N2T & N3T Series – Rectangular, Tapered Attenuators

The N2T & N3T series with 200mm and 300mm tapered splitters respectively are ideal for general HVAC purposes and suitable for industrial applications.

The splitters have a bio-soluble acoustic grade glasswool that is incombustible and encased behind finely perforated galvanized steel.

Suitable for dry applications. Refer to the N2T/ N3T..QS series for applications where moisture may be present in the airstream.

N2T & N3T Series - Rectangular Q-Seal, Tapered Attenuators

The Rectangular Q-Seal tapered attenuator includes the qualities of the N2T & N3T series attenuator and incorporates an infill system protected by an impermeable plastic membrane/film.

The N2T/ N3T..QS series is suitable in medical and clean room applications and any sensitive ventilation systems requiring an infill material that prevents the possibility of insulation fibre ingress into the airstream.

They are also suitable where the insulation medium is directly exposed to weather, grease, liquid, or dusts. Attenuators of this model type may also be cleaned periodically by low-pressure steam or pressure washer equipment.

CONSTRUCTION

- Casing and splitters made from Z275 coated galvanized steel.
- Infill from bio-soluble acoustic grade glasswool or mineral wool that is incombustible and encased behind finely perforated galvanized steel..
- Q-Seal (QS) variants have infill material protected by liquid impermeable Melinex® PET Plastic Film.
- Standard construction rated to duct pressures between -500Pa and +1kPa relative to atmosphere.

SELECTION PROCEDURE & PRESSURE DROP CALCULATION

Attenuators with small percentages of free area and longer length will provide the greatest attenuation but also the greatest pressure loss. Certain steps within the attenuator selection process may therefore need to be repeated several times to determine the best selection within these constraints.

The Fantech Selection Program can be used to quickly create multiple selection options or alternatively the following manual process can be used.

Step 1: Insertion Loss

From the performance data table select an attenuator that provides an insertion loss closest to that of the required insertion loss.

Step 2: Dimensions

Considering the dimensional constraints of the connecting duct work or installation location, select the most suitable set module width for the attenuator chosen in step one and nominate the required height (unrestricted).

Step 3: Face Velocity

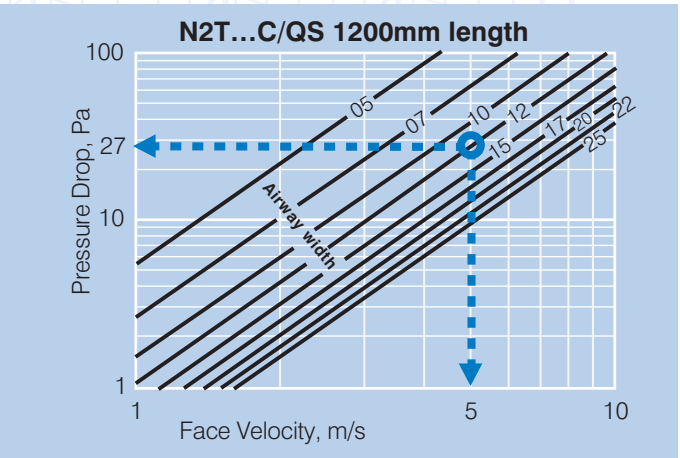

Calculate the face velocity of the attenuator selected using the known air volume of the application and chosen width and height:

$$\textit{Face Velocity (m/s)} = \frac{\textit{Air Volume } (m^3/s)}{\textit{Width (m)} \times \textit{Height (m)}}$$

Step 4: Pressure Drop Graphs

Locate the pressure drop graph which matches the length of the attenuator selection. Draw a line vertically from the calculated Face Velocity to where it intersects the chosen attenuator model. Draw a line horizontally from this point and where it intersects the vertical axis is the pressure drop for the chosen attenuator.

Example: A N2T12C attenuator with a calculated face velocity of 5m/s has been selected. The resulting pressure drop is 27Pa.

© FANTECH 2024

SECTIONAL SIZING AND JOINING FLANGE INFORMATION

- Flanges 35mm TDF or compatible up to a maximum height or width of 1200mm. Above these sizes 40mm or 50mm steel angle section frames used, supplied undrilled.
- Matching flanges for attaching to accompanying ductwork can also be supplied.
- Rectangular attenuators will typically be made in a single piece up to a maximum of 2250mm in width, length, or height where practical for transportation. Above this dimension attenuators will be split into multiple sections in the dimension(s) exceeding the 2250mm limit noted.
- As a special request, attenuators may be divided into smaller sized sections than standard to fit through small spaces, before they are reassembled as a single unit on site.

CUSTOMISED ATTENUATOR OPTIONS

The following are available as special options when ordering Fantech rectangular attenuators:

- Different materials of construction such as Stainless Steel Grades 304 and 316.
- Paints / protective coatings such as epoxy paint, Chlorinated Rubber etc.
- Flange material/dimensions profile can be specified (e.g. Ductmate, TDF, Plain Steel Angle).
- Access doors for easy cleaning (e.g. in Kitchen Exhaust Applications).

INSERTION LOSS

Static insertion loss values derived from tests to ISO 7235:2003 Acoustics

- Laboratory measurement procedures for ducted silencers and air-terminal units.
- Insertion loss, flow noise and total pressure loss.
- Insertion losses greater than 60dB are not reported.

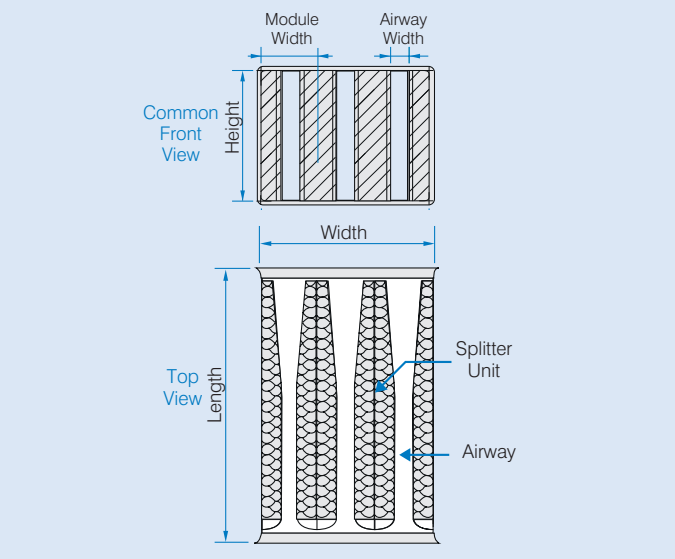

SUGGESTED SPECIFICATION

Rectangular attenuators shall be of the N2T, N2T..QS, N3T or N3T..QS Series as designed and manufactured by Fantech Pty. Ltd. and shall have the dimensions, acoustic attenuator insertion losses and pressure losses as scheduled. Acoustic Attenuator Insertion Loss data for the attenuators to be derived from tests in accordance to ISO7235:2003

The casing shall be manufactured from forming grade Z275 coated galvanised steel sheet with Pittsburgh corner seams and 200mm or 300mm thick tapered splitters. The infill material shall be bio-soluble acoustic grade glasswool or mineral wool. The infill material shall be encased in galvanised perforated sheet metal. Where attenuators are exposed to the weather, grease, liquid, or dusts they shall be of the N2T..QS or N3T..QS Series where all infill materials shall be protected with an impervious film to prevent the ingress of moisture.

The infill material when tested in accordance with AS1530.3:1999 shall have the following indices:-

Ignitability 0 Spread of flame 0 Heat evolved 0 Smoke developed 1

Note: Dimensions will vary according to your selection and be included in the "How To Order" model number.

HOW TO ORDER

MODEL
N2T - 200mm Tapered Splitter
N3T - 300mm Tapered Splitter

Airway Width Code

05 - 50mm	15 - 150mm	25 - 250mm
07 - 75mm	17 - 175mm	30 - 300mm
10 - 100mm	20 - 200mm	
12 - 125mm	22 - 225mm	

Length Code

HOW TO DETERMINE WEIGHT

Attenuator weights for individual models are available on the Fantech Selection Program or alternatively the following manual process can be used to attain the approximate maximum weight of each attenuator combination.

Divide the chosen attenuator width by the chosen module width to get the quantity of modules within the attenuator. Round up to the length and height row closest to the attenuator selected, and then the column with corresponding module quantity will provide the maximum weight of the selection. Interpolate for intermediate sizes as required.
